"Essentials in Ophthalmology" is a new review series covering all of ophthalmology categorized in eight subspecialties. It will be published quarterly, thus each subspecialty will be reviewed biannually. Given the multiplicity of medical publications already available, why is a new series needed? Consider that the half-life of medical knowledge is estimated to be around 5 years. Moreover, it can be as long as 8 years between the first description of a medical innovation in a peer-reviewed scientific journal and publication in a medical textbook. A series that narrows this time span between journal and textbook would provide a more rapid and efficient transfer of medical knowledge into clinical practice, and enhance care of our patients.

This volume from the Essentials in Ophthalmology series presents recent developments in the diagnosis and treatment of corneal disease. Its intention is not to replace the relevant textbooks, but to serve as a bridge between the primary and tertiary literature. This well-structured volume covers the following main topics: Confocal microscopy of the cornea.- Treatment of adenoviral corneal opacities.- Conservative treatment of severe surface disorders.- Amniotic membrane transplantation.- Limbal stem cell transplantation.- Techniques in penetrating keratoplasty.- Deep anterior lamellar keratoplasty.- Corneal allograft rejection.- Infective complications following LASIK. All topics have direct clinical importance and will not only keep ophthalmologists up-to-date, but will inform them how to treat their cornea patients with optimal (or best possible) diagnostic and therapeutic procedures.

The 8 recurring volumes of the "Essentials in Ophthalmology" series cover the most recent developments in one of eight subspecialties in Ophthalmology. With four volumes published per year, each subspecialty is newly visited every 24 months, with a distinct focus on recent developments. By bridging the gap between original research and medical textbooks, the transfer of this developing knowledge into daily practice is greatly enhanced.

Are you looking for concise, practical answers to those questions that are often left unanswered by traditional references on cornea and external diseases? Are you seeking brief, evidence-based advice for the daily examination of patients? Curbside Consultation in Cornea and External Disease: 49 Clinical Questions provides quick and direct answers to the thorny questions most commonly posed during a "curbside consultation" between experienced clinicians. Dr. Frank Price Jr., joined by associate editors Dr. Marianne Price and Dr. Erik Letko, have designed this unique reference in which cornea and external disease specialists offer expert advice, preferences, and opinions on tough clinical questions commonly encountered by ophthalmologists, residents, and other health care professionals. The unique Q&A format provides quick access to current information related to cornea and external diseases with the simplicity of a conversation between two colleagues. Images, diagrams, and references are included to enhance the text and to illustrate clinical diagnoses and treatment plans. Curbside Consultation in Cornea and External Disease: 49 Clinical Questions provides information basic enough for residents while also incorporating expert pearls that even high-volume ophthalmologists will appreciate. Refractive surgeons, general ophthalmologists, and residents alike will enjoy the user-friendly and casual format. Some of the questions that are answered: - A patient presents with corneal ulcer. What work-up and treatment would you recommend? o As answered by three different specialists in the USA, Europe, and India. - What should I do for a patient who presents with 6-D astigmatism after undergoing penetrating keratoplasty 4 months ago? - A 63-year-old male complaining of blurry vision has 360-degree peripheral corneal stromal thinning and conjunctivalization and moderate cataract in both eyes. Does he need surgery? - A piece of glass flew into my patient's eye. The exam shows central corneal perforation - A 67-year-old female complains of constant eye irritation. The exam shows conjunctivochalasis of the lower bulbar conjunctiva. Should I excise the redundant conjunctiva? - I have a general ophthalmology practice in a remote area. When should I consider doing corneal cultures?"

Ocular Surface Disease: Cornea, Conjunctiva and Tear Film incorporates current research and the latest management strategies as well as classification systems and treatment paradigms for all forms of ocular surface disease. This is the first comprehensive resource that helps you to meet ocular surface disease challenges effectively using today's best medical and surgical approaches. Get the complete, evidence-based guidance you need to provide optimal care for your patients with ocular surface disease. Implement the latest drug treatments and surgical interventions to provide better outcomes with fewer complications. Hone and expand your surgical skills by watching videos of leading experts performing advanced procedures including ocular surface transplantation techniques; amniotic membrane transplantation; pterygium surgery; lamellar keratoplasty (DALM) in ocular surface disease; and keratoprosthesis surgery. Visualize how to proceed by reviewing detailed, full-color images and consulting new classification systems and treatment paradigms for mild to severe forms of ocular surface disease. Take it with you anywhere! Access the full text, downloadable image library, video clips, and more online at expertconsult.com.

The second edition of this excellent and highly popular textbook continues to address the Royal College of Ophthalmologists (RCOphth) syllabus for trainee ophthalmologists and is an essential read for those

studying ophthalmology, optometry and orthoptics. As a theoretical and practical aid, it guides readers through postgraduate Ophthalmic Specialist Training. Emphasis is placed on the practical assessment and management of key ophthalmic conditions. Clearly laid out and highly illustrated in full colour throughout, each condition is discussed in two or three-pages, beginning with general explanations of the pathophysiology and clinical evaluation, followed by differential diagnoses and treatment options. This thoroughly revised second edition includes new chapters on paediatric ophthalmology, refractive surgery and microsurgical skills. This text will appeal to foundation doctors, specialist trainees in ophthalmology, candidates preparing for the Fellowship of the Royal College of Ophthalmology (FRCOphth) examination, consultants in ophthalmology and practitioners looking for a comprehensive but accessible guide to the subject.

Disease and pathologies can differ based on geographic area as well as social conditions of life. This is no less true for the treatment of cornea and external diseases. It is important for ophthalmologists to remain updated on the best practices for treatment of unique cases that may be rare in other countries, as well as vigilant as to the best course of treatment for specific demographics. Medical Atlas of Cornea and External Diseases in Middle Eastern Populations details the unique cases of cornea and external diseases in the Middle East, providing a comprehensive collection of cases that are very rare in other regions of the world. This atlas presents over 800 pictures of different corneal pathologies and external diseases, including before and after treatment, over ten years of clinical practice. The atlas focuses on Middle Eastern patients with all diagnoses and treatment performed by the author at Malayan Eye Center in Yerevan, Armenia. Covering topics such as corneal surgeries, eyelid diseases, and congenital disorders, this book is the ideal resource for ophthalmologists, junior practitioners, medical residents and students, professors, hospital administration, researchers, and academicians.
