In present day scenario security of the system is the sole priority of any organisation. The main aim of any organisation is to protect their data from attackers. In cryptography, attacks are of two types such as Passive attacks and Active attacks . Passive attacks are those that retrieve information from the system without affecting the system resources while active attacks are those that retrieve system information and make changes to the ...

Cryptography deals with various security principles which are as follows:

Confidentiality - It specifies that only the sender and the recipient or recipients should be able to access the message.

Confidentiality will get lost if an authorized person is able to access a message.
