The Absorption-Addiction Model. McCutcheon (2002) proposed that parasocial relationships form due to deficiencies in people’s lives. They look to the relationship to escape from reality, perhaps due to traumatic events or to fill the gap left by a real-life attachment ending.

Relationship Theories Revision Notes | Simply Psychology  
This model suggests that addictions are the result of a lifelong disease that is biological in origin and exacerbated by environmental factors. It goes on to suggest that addicted individuals are essentially powerless over their problem and will be unable to remain sober by themselves, in the same way that a person with a degenerative illness is unable to fight their disease without medication.

The Relationship Model of Addiction: A New Paradigm for ...  
The Relationship Model of Addiction establishes a new standard for understanding and treating addiction. It expands the disease concept by re-defining addiction as a relationship. The model accounts for the cause of addiction as related to the preponderance of non-emotionally nourishing relationships, unmet emotional needs, the resultant pain and need to relieve that pain.

The Relationship Model of Addiction  
A multinomial logistic regression analysis indicated that there was a significant relationship between source of motivation and stage of change at intake. Controlling for severity, treatment history, legal status, and primary substance use, persons entering treatment with higher levels of internal motivation were more likely to be in the action stage than the precontemplation stage.

The supercar is believed to be an electric Porsche Taycan, which costs from £83,000 new, with the Turbo S model retailing at £139,000. The Turbo S goes from 0-60mph in 2.6 seconds.

The Relationship Model of Addiction establishes a new standard for understanding and treating addiction. It expands the disease concept by re-defining addiction as a relationship. It integrates experiential, humanistic and existential perspectives; sheds light on the emotional and psychological dynamics of addiction; and has powerful implications for treatment and recovery. We know that recovering addicts must eventually make the transition from pathologically dependent relationships based on the need for relief to sober healthy, intimate, emotionally nourishing relationships. Regardless of one's experience in past and current relationships, doing the necessary self-work and learning some basic principles, pitfalls, challenges and skills, can make the transitions to healthy, emotionally nourishing, intimate relationships possible.

The Relationship Model of Addiction(tm) (TRMA(tm)) A New Paradigm for Understanding Addiction, Recovery and Treatment, applies to both substance and process addictions (porn, sex and love addictions, compulsive gambling and codependency? Understanding how TRMA (tm) applies to the aforementioned addictions serves clinical and educational purposes – for treatment practitioners, academia and those on a path of recovery.

Principles of Addiction provides a solid understanding of the definitional and diagnostic differences between use, abuse, and disorder. It describes in great detail the characteristics of these syndromes and various etiological models. The book's three main sections examine the nature of addiction, including epidemiology, symptoms, and course; alcohol and drug use among adolescents and college students; and detailed descriptions of a wide variety of addictive behaviors and disorders, encompassing not only drugs and alcohol, but caffeine, food, gambling, exercise, sex, work, social networking, and many other areas. This volume is especially important in providing a basic introduction to the field as well as an in-depth review of our current understanding of the nature and process of addictive behaviors. Principles of Addiction is one of three volumes comprising the 2,500-page series, Comprehensive Addictive Behaviors and Disorders. This series provides the most complete collection of current knowledge on addictive behaviors and disorders to date. In short, it is the definitive reference work on addictions. Each article provides glossary, full references, suggested readings, and a list of web resources Edited and authored by the leaders in the field around the globe – the broadest, most expert coverage available Encompasses types of addiction, as well as personality and environmental influences on addiction

The central problem in the study of addiction is to explain why people repeatedly behave in ways they know are bad for them. For much of the previous century and until the present day, the majority of scientific and medical attempts to solve this problem were couched in terms of involuntary behaviour; if people behave in ways they do not want, then this must be because the behaviour is beyond their control and outside the realm of choice. An opposing tradition, which finds current support among scientists and scholars as well as members of the general public, is that so-called addictive behavior reflects an ordinary choice just like any other and that the concept of addiction is a myth. The editors and authors of this book tend to take neither view. There has been an increasing recognition in recent literature on addiction that restricting possible conceptions of it to either of these extreme positions is unhelpful and is retarding progress on understanding the nature of addiction and what could be done about it. This book contains a range of views from philosophy, neuroscience, psychiatry, psychology and the law on what exactly this middle ground between free choice and no choice consists of and what its implications are for theory, practice and policy on addiction. The result amounts to a profound change in our thinking on addiction and how its devastating consequences can be ameliorated. Addiction and Choice is a thought provoking new volume for all those with an interest in this global issue.

The most important relationship is with your Self. Detailed understanding of the relationship with your Self. (From The Relationship Model of Addiction perspective by Daniel Linder, MFT)

In a book sure to inspire controversy, Gene Heyman argues that conventional wisdom about addiction – that it is a disease, a compulsion beyond conscious control – is wrong. At the heart of Heyman's analysis is a startling view of choice and motivation that applies to all choices, not just the choice to use drugs. Heyman’s analysis of well-established but frequently ignored research leads to unexpected insights into how we make choices – from obesity to McMansionization – all rooted in our deep-seated tendency to consume too much of whatever we like best.

Stage III of Recovery – Creating Emotionally Nourishing Relationships aka The Art of Relating and Intimacy "A relationship is a joint-effort creation." The primary factor contributing to the struggles so many singles have to deal with in their pursuit of a deep, meaningful and enduring connection, and for so many couples whose relationships are rife with unresolved conflict and unexpressed tensions, is the lack of knowhow. Relating and intimacy are creative processes – art forms themselves. As is the case with any art form, basic principles apply and must be practiced whenever relating. Training is required to become proficient, if not, masterful. The Art of Relating and Intimacy is merely a relationship-training guide. You will learn Twenty Basic Principles. You will learn how to prepare for the challenges and avoid pitfalls that come with the territory of dating, relating and intimacy -building. You may begin developing the most important relationship of all – with your Self, which is the key to your creative potential. As you more clearly understand the Four Essential Skills of Relating, you may well be on your way towards greater proficiency, if not, mastery. With this training, you will see and create more desirable outcomes, deeper, more meaningful connections and emotionally nourishing relationships.

This ground-breaking book advances the fundamental debate about the nature of addiction. As well as presenting the case for seeing addiction as a brain disease, it brings together all the most cogent and penetrating critiques of the brain disease model of addiction (BDMA) and the main grounds for being skeptical of BDMA claims. The idea that addiction is a brain disease dominates thinking and practice worldwide. However, the editors of this book argue that our understanding of addiction is undergoing a revolutionary change, from being considered a brain disease to a disorder of voluntary behavior. The resolution of this controversy will determine the future of scientific progress in understanding addiction, together with necessary advances in treatment, prevention, and societal responses to addictive disorders. This volume brings together the various strands of the contemporary debate about whether or not addiction is best regarded as a brain disease. Contributors offer arguments for and against, and reasons for uncertainty; they also propose novel alternatives to both brain disease and moral models of addiction. In addition to reprints of classic articles from the addiction research literature, each section contains original chapters written by authorities on their chosen topic. The editors have assembled a stellar cast of chapter authors from a wide range of disciplines – neuroscience, philosophy, psychiatry, psychology, cognitive science, sociology, and law – including some of the most brilliant and influential voices in the field of addiction studies

today. The result is a landmark volume in the study of addiction which will be essential reading for advanced students and researchers in addiction as well as professionals such as medical practitioners, psychiatrists, psychologists of all varieties, and social workers.

Providing essential theoretical and practical guidelines for clinicians, educators, policymakers, and public health professionals, The Handbook of Addiction Treatment for Women is a comprehensive resource of the most current research and knowledge from recognized experts in the field of addiction and treatment. This much needed guide offers an historical context on the issue of women and addiction, examines the myriad challenges of the female addict, and includes recommendations for choosing a course of treatment that will meet the specific needs of an individual woman addict.

The Relationship Model of Addiction - A New Paradigm for Understanding Addiction and Recovery Stage I of Recovery - "Breaking-up" Recovery is a transitional journey -- getting out of unhealthy, addictive relationships and into healthy, emotionally nourishing relationships. An addiction is a relationship with a means of relief. It's a 'bad' or unhealthy relationship. The recovery journey, as is the case with any 'bad' relationship, once you recognize it is a 'bad' relationship, you will want to get out - "break-up." However, due to the strong emotional dependency you've developed, there are a number of hurdles you must get over in order to extricate yourself from this relationship. There are seven "stopping or destination points" in Stage I of your recovery journey. For programming purposes, each "point" entails either education or experiential processes, which can include writing, sharing or interactive exercises. 1. Seeing the relationship for what it is - a relationship with a means of relief, driven by the need for relief, that is impeding your functioning and destroying your life and relationships. 2. Recognizing the Progression - of increasing involvement, loss of control, problems, isolation, impaired functioning and decision-making. 3. Working Through the Stigma of Powerlessness - Confronting the shame associated with admitting powerlessness, that keeps you from self- acceptance. 4. Discovery - When did this relationship begin? Going back to either the moment you first experienced the extraordinary effect, or the period of time when the relationship was forming, and connect to what was going on emotionally and in your relationships at the time. 5. Emotional Withdrawal - Identify your experience with 2 types of emotional withdrawal. When "coming down" sobriety becomes a "less than" experience, and in the process of "breaking-up," there is the void of alone that must be consciously crossed. 6. Dismantling Denial - Making the unconscious conscious, exposing the perceptual distortion that occurs in the service of preserving and protecting the relationship, identifying manifestations of denial, delusion and deception. 7. Saying "Good-bye" - Writing a "Good-bye" letter, that you've made a decision to "break-up," and what that decision is based on; and a "Declaration" letter that describes the kind of relationships you're longing for, and your commitment to go after what you want. 8. "No (sexually) intimate relationships during the first year of recovery." When the primary goal is to achieve a sustained period of stabilization, getting sexually involved often leads to intense feelings you will likely be ill-equipped to deal with, increases risk of relapse and using the person or relationship as a substitute for the means of relief.
