7 reviews of Veterinary Practice Solutions "I have been with Veterinary Practice Solutions since 2012. I can't say enough praises for how much they have helped me. My practice was struggling and I was struggling. I was taught how to identify "trouble makers" - negative people and release them. I started monitoring how my practice was doing and to take appropriate steps to either correct a dip ...

This title is directed primarily towards health care professionals outside of the United States. For most dermatological conditions several treatment and/or management options are available, making the situation even more complicated. Small Animal Dermatology is a handy reference for these cases and encourages the practitioner to pursue a definitive diagnosis and plan effective management even if the condition can not be cured. Unique new case-based approach relating essential theory to clinical practice Modern, highly designed and illustrated so key information can be seen at a glance Self testing, MCQs and remediation means these books are ideally suited for CPD or as an exam revision aid Essential for all general small animal veterinary practitioners and students

Pere Mercader, a consultant with a broad experience in the veterinary sector, provides us with the keys to efficient veterinary practice management and IT management tools for calculations and assessment in the clinic.

This title is directed primarily towards health care professionals outside of the United States. The cases discussed in Small Animal Ophthalmology cover selected areas of the subject, in particular common or potentially frustrating cases, as well as the occasional less frequently encountered diseases which should, nonetheless, be recognised by general practitioners. Each section is fully illustrated and useful appendices are included, covering ophthalmic emergencies, conditions which should be checked for in young animals and commonly used pharmacological agents. Unique new case-based approach relating essential theory to clinical practice Modern, highly designed and illustrated so key information can be seen at a glance Self testing, MCQs and remediation means these books are ideally suited for CPD or as an exam revision aid Essential for all general small animal veterinary practitioners and students This is a series of must-have practical handbooks covering specific veterinary problems using a unique, consistent, case-based approach. From simple routine first opinion cases to referrals and more complex clinical scenarios, the series provides the essential knowledge that will lead to improved skills and practice for veterinary practitioners undertaking clinical professional development or students nearing the end of their courses and needing a vital examination revision aid. New case-based approach helps relate essential theory to the real world of the busy clinic Each case outlines: initial presentation, clinical signs, examination techniques, differential diagnoses, treatment options, clinical tips and relevant nursing information Highly illustrated using full colour throughout so key information can be found at a glance Numerous self-assessment tests and multiple choice questions with remediation Ideally suited for CPD and as an exam revision aid

Saunders Solutions in Veterinary Practice consists of a series of practical handbooks on selected medical topics on specific veterinary problems. Case-based, this series is aimed at the small animal veterinary practitioner who has qualified less than 10 years and needs quick access to information and wants to increase his/her confidence on handling that range of cases that cover the spectrum that lies between the simple routine first opinion case and the referral. Solutions in Veterinary Practice provides additional knowledge that will lead to improved skills and practice for veterinary practitioners. Not only practitioners, but also veterinary students nearing the end of their course will find this series very useful to brush up their knowledge in a particular area. The volumes are also written with the veterinary nurse in mind with a particular interest in a specific topic, using 'Nurse Boxes' in the text to guide them to the specific information they need. new approach: clinical cases offering examination, treatment options, clinical tips relevant for the general small animal veterinary practitioner - all case descriptions based on common template offers synoptic, easy accessible and essential information provides essential information on selected topics authorship ensures accuracy of information relevant to all general practitioners written to increase the skill and practice the general veterinary practitioner intend to meet CPD-need, but focus on: differential diagnosis and practical case handling offers self-assessment features at the end of every chapter making it relevant for veterinary students as well broad readership: practitioners and students indicated in the text by ' Notes for Vets'; nurses indicated in the text by 'Notes for Nurses' and pet owners indicated in the text by ' Notes for Pet Owners' handy format with flexi cover species covered to be limited to cats, dogs and rabbits full colour throughout BSAVA Manuals in various topics, Blackwell, extent varies from 169 to 464 pages, price varies from £ 47 to £ 59 for members and £ 69 to £ 89 for non-members. - system based approach case based approach as opposed to Blackwell's disease based approach as we strongly feel that this approach is more beneficial for the practitioner - taking the veterinary practitioner as a starting point (the animal comes in the practice with certain symptoms, then what happens next) - our books will be synoptic, easy accessible and with the essential information (bullet points) for user-friendliness and easy access to the content. The majority of the BSAVA Manual have included a lot of information and have moved from bullet pointed text to more elaborate text. - we want the reader to understand why certain steps are taken by means of decision trees: if you do this, then this will happen; if you chose to follow this path, this will be the consequence, etc. It will be quite a challenge to get this right and may not be applicable to every case, but the other potential authors felt very strongly we should include this as this is lacking in the majority of books at the moment - full colour throughout; no plate sections - our books will not aim to cover the whole range, but concentrate on the most common cases that general/ small animal practitioners will see in their practice - coverage of dogs, cats and rabbits - ours will have handy format and flexi cover; BSAVA Manual published in very large format: 297 x 210 mm (American A4 - BSAVA Manuals do not provide the set-by-step guide as we propose - manuals have become top heavy recently and drift towards a more academic and less practical approach Dobson: Small Animal Oncology, 2001, Blackwell, 304 pages, \$94.99 - written in note form and without using the case-based approach: from epidemiology, etiology, pathology and presentation through to staging, management, and prognosis of an chosen malignancy
